

DAMOVO AND MOBITEX ANNOUNCE PARTNERSHIP IN POLAND

Damovo chosen to provide and implement the wireless products of the Swedish company Mobitex Technology AB.

Warsaw, January 11, 2006 – Damovo Poland, global services enterprise specializing in corporate communication in areas such as IP Telephony, VOIP, Converge Networks of Voice and Data and Managed Services, and Mobitex Technology AB, manufacturer and supplier of wireless networks, have signed a partnership to collaborate on the Poland market. This month Damovo will start to provide and implement the total portfolio of products and services from Mobitex Technology AB to the corporate Polish market

Mobitex™ is an advanced technology for wireless data. Mobitex is based on packet data technology and offers fast and secure data transmission with guaranteed availability around the clock. In operations where rapid response times and high security are prioritized, Mobitex sets the standard for business-critical wireless data communications.

The technology is specially designed for business applications and is already widely used in dozens of countries around the world in such areas as transport and logistics solution, police, rescue services and other public authorities, municipalities, energy companies and parking companies, public transport and taxi companies and wireless payment.

The system proved its efficiency during critical situations and public disasters like the blackouts and terrorist attacks on Sept 11 in USA. The Mobitex system is the number one choice for more than 100 government organizations and security departments all over the world. (more info. www.mobitex.com/technology/reliable.asp)

*"We have excellent experience from working with Damovo in Latin America and when we decided to enter the Polish market, working with Damovo as our local representative and partner was a natural choice. Damovo's extensive experience and strong presence in the Polish market, combined with highly reliable and efficient Mobitex solutions will provide an excellent opportunity for e.g. municipalities and utility companies to streamline and modernize their operations and business," says **Göran Rydén, Managing Director of MOBITEX Technology AB.***

*"Mobitex was an early market leader with innovative mobile data solutions. It is a robust, secure and proven technology for demanding professionals. We hope that also Polish customers will use and appreciate wide merits of Mobitex solutions as so many other professional users around the globe," says **Miroslaw Sadluk, Managing Director of DAMOVO Poland.***

About Mobitex Technology AB

Mobitex Technology AB designs, supplies and supports wireless packet switched data networks using the unique Mobitex technology. Mobitex™ is the world leading system for dedicated wireless data developed originally by Ericsson. Together with our partners, we help our customers build solutions for instant and reliable wireless data communications.

Mobitex Technology AB was established in 2004 when the Mobitex division was transferred from Ericsson. The company has extensive competence in the field of wireless data having supplied over 30 networks worldwide to major and independent Telecoms operators.
