

July 2004

For Immediate release

Narrowband is now – and it's set for Gothenburg!

Mobitex manufacturers, operators and solution providers supply business critical wireless data solutions that help organisations run their business more profitably and efficiently.

The Mobitex Association is the worldwide association for the Mobitex business community, network operators, software developers, hardware manufacturers and customers and will be holding its **International Conference and Exhibition in Gothenburg, Sweden from September the 20th to the 23rd**.

Information and support will be available to members and associates, along with presentation papers covering all aspects of Mobitex as a technology, presented by association members such as **Mobitex Technology AB, CML Microcircuits, BT, Cingular, Wavenet and RAM Mobile Data**.

This annual event provides key opportunities to discuss face-to-face, exciting new developments in both hardware and software technology. Kevin Swann, Chairman of the Mobitex Association and Sales and Marketing Director of CML Microcircuits, will be discussing the much talked about and soon to be released CMX990 GMSK packet data modem and RF transceiver IC, often referred to by the industry as the crucial 'data-pump' in Mobitex applications.

Further information, including a detailed agenda, can be obtained directly from the Mobitex Association by sending an email to: info@mobitex.org or by visiting the website: www.mobitex.org

Ends.
